

PACK MAT

**The Sand-Saving
Deep Bedding Alternative.**

DEEP-BEDDED COMFORT

REDUCED SAND USAGE.

Pack Mat delivers the health and productivity benefits of a deep-bedded sand system while helping reduce bedding usage, labour, and operational costs.

Designed for free-stall barns, Pack Mat combines the cushioning and cow comfort benefits of sand bedding with a durable rubber crumb-filled mattress system underneath. The result is a cleaner, more consistent stall surface that helps improve cow comfort while reducing sand usage by 50–70%.

Your cows get the cushioning they need for healthy joints and hocks, while you reduce the equipment wear, labour, and maintenance challenges associated with sand-laden manure.

PACK MAT

SYSTEM COMPONENTS

01

RUBBER CRUMB FILLED MATTRESS

Provides the soft, durable base that mimics deep bedding. This durable base is the foundation of our Pack Mat system as it creates even stall dimensions for proper indexing equating to cleaner cows and stalls. This mattress provides excellent softness and force absorption due to three primary factors: the softness of the crumb pieces, shape of the crumb, and the spaces between each piece of crumb. All these factors work together to allow the mattress to absorb and dissipate repetitive force.

02

TOP COVER

The Pack Mat top cover is made of reinforced poly fabric that provides a water resistant and breathable layer, protecting the mattress while providing an excellent foundation for the top layer of sand. Sand sits on this reinforced poly cover to provide additional comfort.

03

SAND BEDDING LAYER

Two or three inches of sand create the top comfort layer of the Pack Mat system, delivering the familiar cushioning and traction cows prefer while significantly reducing total sand usage compared to traditional deep-bedded stalls.

04

POLY PILLOW™ (optional)

Recommended for all Promat's stall system: A specialised brisket locator used to help position cows correctly and comfortably and aids with cleaning. Compatible with all of Promat's stall systems.

WHY COMFORT MATTERS

Comfort That Supports Productivity

Pack Mat delivers the comfort benefits of deep-bedded sand while providing a more efficient and manageable bedding system for producers.

The rubber crumb-filled mattress underneath the bedding layer creates additional shock absorption and cushioning, helping support joint health, improve lying comfort, and encourage natural resting behaviour.

Features

- 50–70% less sand or chopped straw usage compared to deep bedding
- Reduce digging
- The rubber crumb-filled mattress creates shock absorption leading to improved hock health
- Multiple lengths available: 54", 60", 63", 66", 72" (137–183 cm)
- Designed for free-stall barns

PROVEN ROI FOR PRODUCERS

Better comfort. Lower operating costs.

Pack Mat helps producers reduce bedding costs, labour, and equipment wear while maintaining the comfort and health benefits associated with deep-bedded sand systems.

By significantly reducing sand usage, producers can lower ongoing operational costs while simplifying daily stall maintenance and reducing strain on manure handling equipment.

Expected return on investment can range from 12–18 months depending on sand cost.

PRODUCER BENEFITS

- Reduced labour with less bedding application and stall maintenance
- Reduction in sand-laden manure helps decrease equipment wear and maintenance costs
- Cleaner cows and stalls support better herd management

COW COMFORT & HEALTH BENEFITS

- Mimics the comfort and cushioning of deep-bedded sand
- Additional shock absorption supports improved hock health
- Encourages longer lying times and natural resting behaviour
- Stable footing helps cows rise and lie down comfortably
- Cleaner stalls help support udder health and cow cleanliness
- Our Pack Mat system allows you to utilise deep bedding while maintaining consistent stall dimensions

WHAT THE INDUSTRY IS SAYING

“

We milk between 50 and 60 cows. We installed the Promat PackMat with sand on top. At first I was pretty hesitant at going the sand route because to me sand was deep bedded. And I didn't really like the idea of putting a mat underneath it. But when I saw it in barns and heard other farmers testimonials on how little sand they go through, as well as seeing the contour of the stalls being held without the cows digging, I knew that's what I wanted.

Colin Kraemer

“

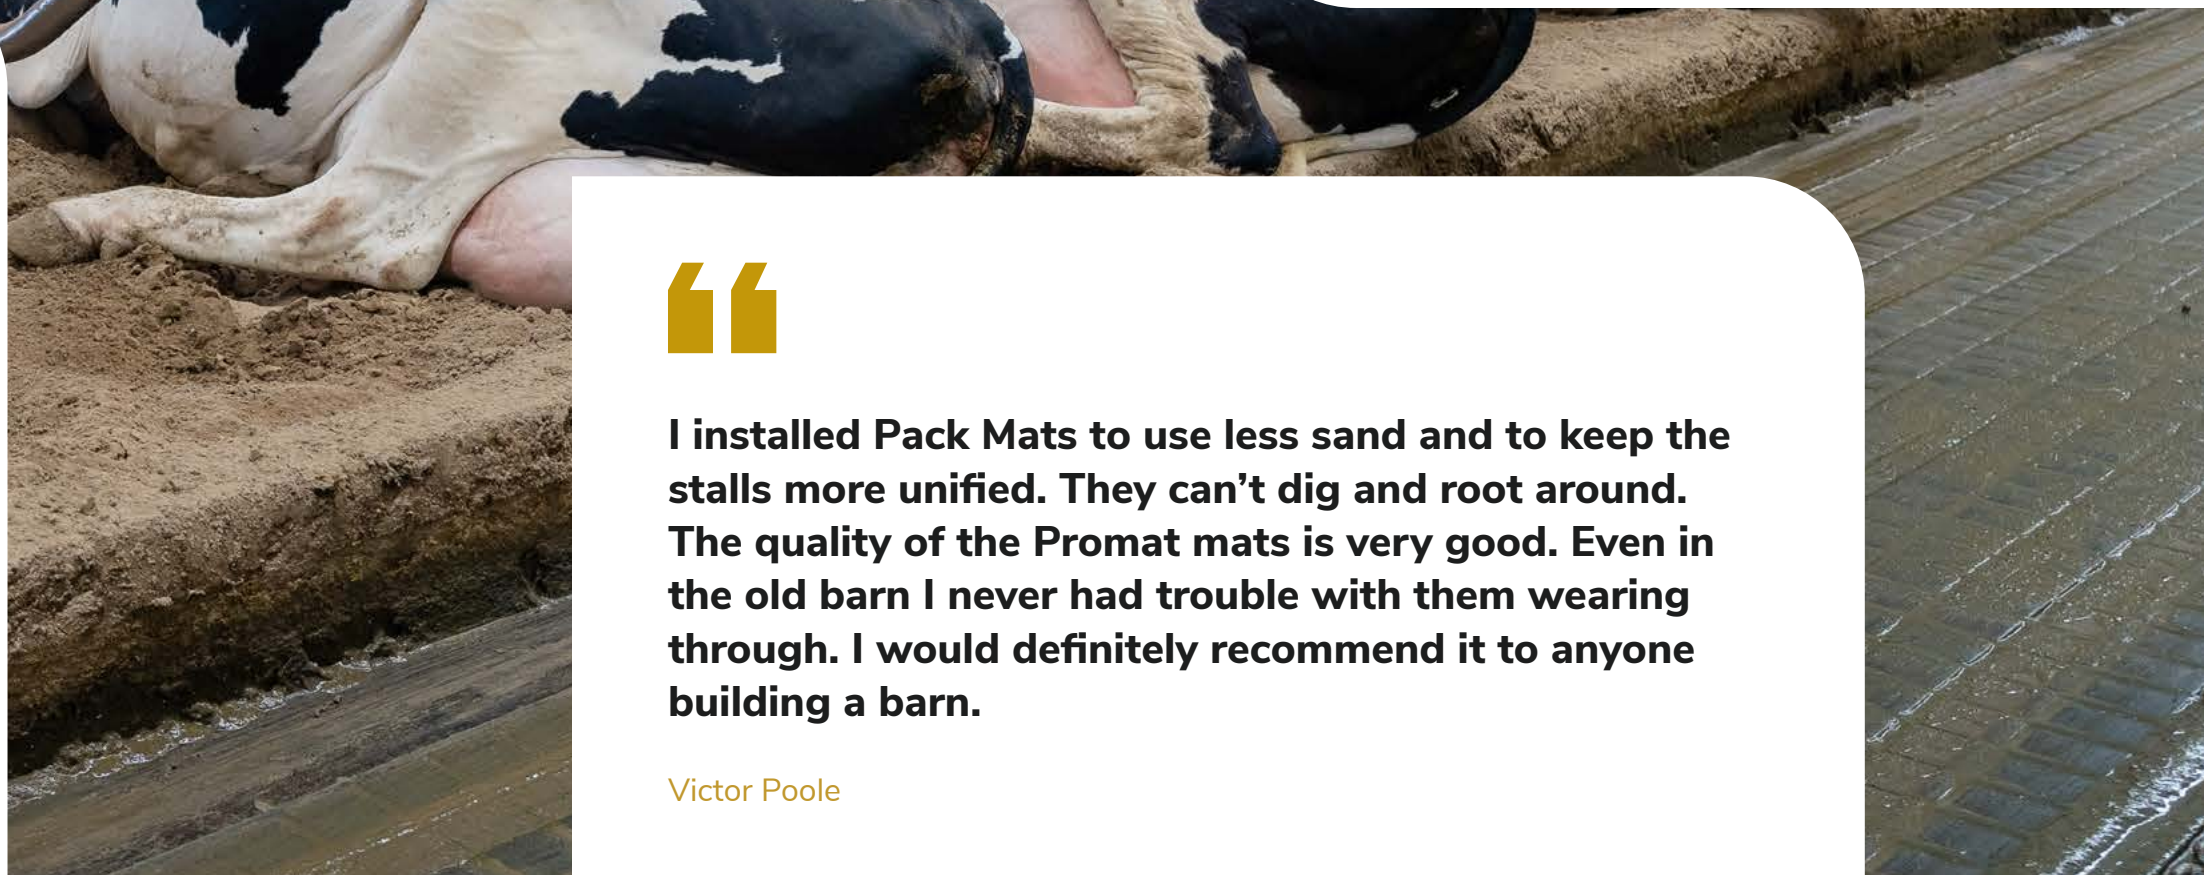

I've been using the Pack Mat system by Promat since 2016, and I can confidently say it's been a great investment for our operation. The Pack Mat system has helped improve efficiency, reduce costs, and maintain cow comfort in our barn. I highly recommend it to any producer looking for a long-lasting, low-maintenance bedding solution.

Andre Van Der Kooi

“

I installed Pack Mats to use less sand and to keep the stalls more unified. They can't dig and root around. The quality of the Promat mats is very good. Even in the old barn I never had trouble with them wearing through. I would definitely recommend it to anyone building a barn.
